

FTM-400DR Desk Stand

Thank you for your purchase of the Nifty FTM-400 Desk Stand.

Stand Assembly:

1. Place one vinyl pad at each corner on the bottom of the stand, locating them as shown in figure 2.
2. As shown in Figure 5, using the red alignment markers at the right side of this page, place two of the vinyl pads to act as lower supports for the control head. Figure 1 above shows the support pads in use.
3. With the radio stand facing away from you, attach the Nifty Accessories label as shown in Figure 4.

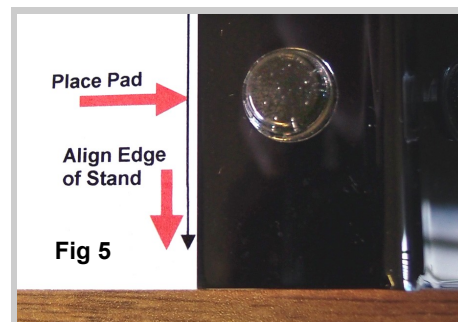

Place Pad →

Attaching the Control Head to the Stand:

1. Plug the control cable into the back of the control head and **insert it into the wire routing channel** to come out the side of the radio as shown with the red line in Fig 3.
2. Center the control head on the stand, seating it against the two vinyl pads.
3. While holding the control head to the stand, turn it over as shown in Fig 2.
4. Keeping the control head snug against the vinyl pads, insert and lightly tighten the mounting screw that came with your radio.

That's It!

Note: If after some use, you notice the stand sliding a bit, turn the stand over and wipe the soft anti-skid feet clean as they may have accumulated a layer of dirt.
